## Material

18 oz. nylon-coated, vinyl with extra UVR added.  
Best cold crack in ski industry. Slick surface.

## Colors

Red, black, blue, orange, yellow, green and gray. Custom colors also available for an extra charge.

## Foam

1.8 lb. 90 ILD open-cell foam with the highest standards.  
Closed-cell available upon request.

## Thread

The thread we use is twice as heavy as the thread used by the U.S. Coast Guard. We add extra UVR protection and extra silicone coating for years of extended wear.

## Straps

1-1/2" black polypropylene for Hydrant Pads and Tower Pads. Tower pad straps measure 1.5" W x 12' L. Post pad straps measure 1" W x 5' L.

## Buckles

Black metal, won't break like plastic, rust-resistant. Self-locking for easy installation and adjustments.

## Pad Closure

All of our pads are made with a weather tight Hook and Loop closure. This allows you, should vandalism or a Groomer strike, to easily remove and replace the damaged cover at a substantial savings.

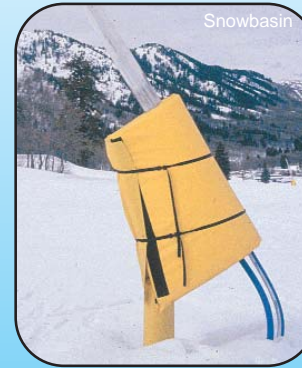

## What customers are saying about our PADDING....

*"Deer Valley Resort started doing business with Idaho Sewing in 1990 when we needed some custom pads for three skier bridges we had built. The prompt service, price, and quality of the product we received from them has kept us coming back.*

*We now order all our tower pads, post pads, and custom pads from Idaho Sewing because we can depend on you for the best prices, delivery as promised, and product quality of the highest available standards."*

Chuck English, Director of Mountain Operations, Deer Valley Resort
